Automated Testing

Each year, millions of clock drawing tests are administered across the world. This is the first and only fully computerized Clock Drawing Test, one of the most widely used cognitive assessment tests. Instant scores and feedback are provided through an exclusively unique software application. Our Automatic Clock Drawing Tests™ are portable wherever there is a computer.

This test effectively reduces wait time and costs associated with manual administration, semi-computerization, and use of other cognitive tests. No other visual attention assessment, executive function measurement, or visuoconstruction method is as sensitive as the Automatic Clock Drawing Test™. Studies show that Automatic Clock Drawing Test™ results correlate with crash risk.

The Automatic Clock Drawing Test™ II is nearly twice as fast as the Automatic Clock Drawing Test™.

Automatic Clock Drawing Tests™ are powerful weapons in the global challenge against cognitive impairment, brain injury, Alzheimer disease, and dementia. These tests actively engage the disabled and those with Parkinson disease. Automatic Clock Drawing Tests also™ offer great potential for screening large numbers of individuals, soldiers, and inmates anywhere there is computer usage.

Automate your agency now.
